Summary

Full-stack developer and Computer Science fresher with hands-on experience building and deploying production applications. Designed and shipped **AgriAgent**, a live full-stack marketplace app on the Play Store, along with deep learning and automation projects used by 200+ real users. Comfortable across the stack – REST API design, database modeling, authentication/security, and cloud fundamentals – with a track record of shipping working software end to end.

Technical Skills

Languages: Python, JavaScript, Node.js

Backend & APIs: Express.js, REST API Design, JWT Auth, Firebase Admin SDK, Google OAuth2

Databases: MongoDB (Mongoose, GridFS), MySQL

ML & Data: TensorFlow, Keras, OpenCV, Scikit-learn, Dlib, NumPy, Matplotlib

Cloud & Tools: AWS Fundamentals, Git, Linux, Helmet, CORS, Puppeteer, Axios

Projects

AgriAgent | Full-Stack Agri-Tech Marketplace ([Live on Play Store](#)) 2025

- Built and deployed a full-stack marketplace app connecting farmers, labourers, contractors, and buyers for equipment rental, produce trading, and crop problem-solving.
- Designed a Node.js/Express REST API with MongoDB across 6+ modules, with multi-provider authentication (Firebase, OAuth2, JWT) and role-based access control.
- Built an admin dashboard for moderation and analytics, and hardened the platform with Helmet, CORS, and rate limiting.

JNTUH Results WhatsApp Bot | Node.js, JavaScript, Puppeteer, Axios ([Repo](#)) 2024

- Developed an automated WhatsApp bot serving 200+ students to fetch academic results, CGPA, and backlog details via hall ticket number, parsing results in under 3 seconds per request.
- Built web scraping and parsing logic to extract subject-wise results directly from the JNTUH portal.
- Implemented rate limiting and session handling to manage concurrent requests and prevent abuse.

Age and Gender Detection | Python, OpenCV, TensorFlow, Keras, Dlib ([Repo](#)) 2024

- Built a deep learning model to predict age and gender from images, trained on 20,000+ images and achieving ~82% accuracy on age prediction.
- Used OpenCV for image pre-processing and face detection, and Dlib for facial landmark alignment.

Health Monitoring on Social Media Over Time | Python, NLP, Topic Modeling ([Repo](#)) 2024

- Developed a system to detect and predict public health trends using temporal topic modeling (TM-ATAM) on Twitter data.
- Validated predictions against CDC and Google Flu Trends data, showing measurable alignment with real-world outbreak patterns.

Education

Malla Reddy Institute of Technology and Science 2021 – 2025

B.Tech, Computer Science

Narayana Junior College 2019 – 2021

Higher Secondary Education (XII) 90%

Certifications

AWS Solutions Architect Associate | Udemy 2025
